

S2424CD Kickoff

S2424CD: A Randomized Controlled Trial of an Intervention Called “Algorithm-Enabled Patients Activated in Cancer Care Through Teams” (A-PACT) to Improve Goals-of-Care Communication for People with Cancer

THURSDAY, APRIL 30 • 1:00-2:00 PM PT • SEACLIFF AB (BAY LEVEL) • ONLINE

All NCORP-based staff and investigators are invited!

We invite members from NCORP sites to learn about this new cancer care delivery trial focused on improving goals-of-care communication between patients with cancer and their clinical care team.

S2424CD features an automated screening tool to reduce the workload for each site and make trial enrollment much easier. The protocol will activate soon, and we are recruiting sites to set up the screening tool in preparation for launch.

This session will discuss:

- Trial objectives and design
- The intervention and goals of care
- Benefit of lay health navigators & education for practices and patients
- Use of EHR-integrated participant screening processes to reduce staff effort
- Financial support for the trial and IT setup
- Logistics for site participation

STUDY CHAIRS

*Ravi B. Parikh,
MD, MPP, FACP
Emory University*

*Manali I. Patel,
MD, MPH
Stanford University*

*Christopher
Manz, MD
Dana-Farber
Cancer Institute*
