MEMORANDUM

Date: June 2, 2020

To: Principal Investigators and Operations/Statistics Offices of NCI CTEP-Supported Clinical Trials Networks & Consortia and DCP-Supported NCI Community Oncology Research Program (NCORP) Research Bases

From: Meg Mooney, MD, Associate Director, CTEP, DCTD, NCI
Worta McCaskill-Stevens, MD, Director, NCORP, DCP, NCI
Rodney Howells, R.Ph., Associate Branch Chief, PMB, CTEP, DCTD, NCI

Subject: Updated (June 2, 2020) Interim Guidance for Patients on Clinical Trials Sponsored by the NCI Cancer Therapy Evaluation Program: Shipment of Oral IND Agents to Clinical Trial Subjects

Due to continued concerns regarding the spread of the novel coronavirus and the ongoing impact it is having on hospitals, clinics, physician offices, and patients’ ability to travel, the NCI Cancer Therapy Evaluation Program (CTEP) is providing updated information to extend the date for site shipment of oral IND agents on CTEP IND sponsored trials.

Ensuring the safety and continuity of care for clinical trial patients is paramount. During the current COVID-19 pandemic, the shipment of oral CTEP IND agents by sites to enrolled subjects on clinical trials will be performed under extenuating circumstances as determined by the physician Investigator in the best interest of continuing patient care.

For studies under CTEP IND with oral investigational agents, the Pharmaceutical Management Branch is extending the alteration of its standard operating procedures to allow the Dispensing Pharmacy to ship oral investigational agents directly to patients through September 13, 2020. Consideration can include possible shipment of multiple treatment cycles to study patients, if feasible, based on supply availability and protocol requirements.

Requests to ship CTEP IND oral investigational agents do not need to be submitted to the Pharmaceutical Management Branch, CTEP for authorization.

- The Dispensing Pharmacy must ensure shipment occurs in appropriately qualified shipping containers to maintain temperature control and product quality and integrity during transit.
  - CTEP can only recommend shipping of agents in qualified temperature-controlled shipping containers to maintain product integrity during transit. If the Dispensing Pharmacy is unable to obtain qualified containers, a decision as to what is in the best interest of the patient for
continuity of care will need to be made in consultation with the study investigator. Document
the decision, the rationale and shipping method for future reference.

- Shipments will occur via overnight delivery service that allows for tracking and confirmation of
delivery.

- Dispensing Pharmacy must ensure proper labeling of the drug product for patient use.

- Adequate records of treatment administration must be maintained and reviewed by the site at the
time of the next scheduled visit (i.e., Diary Cards).

- **Exception:** Agents considered Dangerous Goods must adhere to Department of Transportation and
International Air Transportation Association regulation methods for shipment. CTEP does not
authorize Dangerous Goods shipment unless shipments are performed in accordance with applicable
regulations and by appropriately trained and certified individuals. If sites do not have someone
trained and certified to oversee this process, consider possible dispensing of multiple cycles to the
subject at the next visit or have another individual pick-up the prescription for the subject. The
following is the current list of CTEP oral IND agents that must be shipped as Dangerous Goods:

  NSC 732517  Dasatinib
  NSC 767034  GSK2141795
  NSC 768435  MLN0128 (TAK-228)
  NSC 778795  GDC-0032 (taselisib)
  NSC 783668  LY3023414
  NSC 787289  Vistusertib (AZD2014)
  NSC 814100  CB-5339 tosylate

- **Other Agents with special considerations:**

  NSC 703813  Lenalidomide: This agent must be dispensed in accordance with the REMS
dispensing requirements for the agent.
  NSC 767909  Pomalidomide: This agent must be dispensed in accordance with the REMS
dispensing requirements for the agent.
  NSC 748727  Selumetinib: Temperatures below 25°C must be maintained during transit.
  NSC 763093  (Trametinib) and NSC 763760  (Dabrafenib): Trametinib tablets and dabrafenib
capsules may be shipped together in a refrigerated temperature container.

For studies under IND by another regulatory sponsor (e.g., NCTN Group), participating site investigators
should contact the lead organization conducting the trial to see if similar arrangements are possible for
oral investigational agents for those studies.

Since this is an alteration in the standard operating procedures of the CTEP PMB (not part of the
protocol), this is a not a protocol deviation and it does not need to be reported to the IRB of record for
the trial. Sites will not be asked to submit Corrective Action Plans for shipments to subjects under these
circumstances. PMB will re-assess this process before September 13, 2020 and extend or modify, as
needed.

Submit any questions via email to PMBAfterHours@mail.nih.gov.
